

In the Drawings:

The drawings were objected to on page 2 of the action because the element switched into and out of the common viewing beam path described in the specification was not shown. Accordingly, applicants propose to add FIG. 6 which shows the mirror referred to on page 7, lines 21 to 28, of the applicants' disclosure. The mirror is identified by reference numeral 70 and can be moved into and out of the common beam path as indicated by double arrow 72 and the phantom outline of the mirror.

FIG. 3 was objected to because it did not show the optical beam path traveling through the beam splitter 56. Applicants propose to amend FIG. 3 by adding the broken line within beam splitter 56 as shown on the copy of FIG. 3 submitted with this amendment.

The Examiner's approval of the drawing corrections is respectfully requested.

In the Claims:

Please add claims 15 to 36 as follows:

15. A stereoscopic display system comprising:
- a single display for displaying right and left partial images sequentially in time;
 - first and second optical arrangements for defining
- 5 respective viewing beam paths for viewing only said right and left partial images are transmitted; and,
